Отчет

по лабораторной работе №3.2 «Создание таблиц базы данных PostgreSQL.
Заполнение таблиц рабочими данными»

по дисциплине **«Проектирование и реализация баз данных»**

Автор: Хисаметдинова Д.Н.

Факультет: ИКТ

Группа: К3241

Преподаватель: Говорова М.М.

Санкт-Петербург 2023

Цель работы

Овладеть практическими навыками создания таблиц базы данных PostgreSQL 14, заполнения их рабочими данными, резервного копирования и восстановления БД.

Практическое задание

1. Создать базу данных с использованием pgAdmin 4 (согласно индивидуальному заданию).
2. Создать схему в составе базы данных.
3. Создать таблицы базы данных.
4. Установить ограничения на данные: Primary Key, Unique, Check, Foreign Key.
5. Заполнить таблицы БД рабочими данными (я написала генераторы на python).
6. Создать резервную копию БД.

Указание:

Создать две резервные копии:

- с расширением CUSTOM для восстановления БД;

- с расширением PLAIN для листинга (в отчете);

- при создании резервных копий БД настроить параметры Dump options для Type of objects и Queries.

7. Восстановить БД.

Вариант 17. БД «Телефонный провайдер»

Описание предметной области: Информационная система служит для хранения информации об абонентах телефонной компании и для учета оплаты всех видов услуг абонентами.

Каждый абонент подключен к определенному тарифу. Тариф определяет базовое количество минут, ГБт, смс. Кроме того, он может подключить дополнительные услуги за отдельную плату. Необходимо знать текущий баланс клиента. У клиента могут быть подключены сторонние ресурсы, требующие оплаты, не зависящие от текущего тарифа.

Клиент может менять тариф.

В системе должны храниться сведения о продолжительности разговоров каждого абонента, о стоимости внутренних и междугородных переговоров, о задолженности абонента.

БД должна содержать следующий минимальный набор сведений: ФИО абонента. Номер телефона. Адрес абонента. Город. Зона (город, республика, СНГ, дальнее зарубежье). Страна. Стоимость тарифа. Сроки действия тарифа. Продолжительность разговора в минутах. Дата звонка. Время звонка. Код зоны. Цена минуты. Сумма оплаты. Дата оплаты. Статус оплаты. Дата фактической оплаты.

Вывод

В рамках лабораторного задания я изучила взаимодействие с базами данных в PostgreSQL используя инструмент pgAdmin 4. Я разработала схему базы данных, включая таблицы и их ограничения, заполнил их информацией, создал бэкапы и успешно провёл процедуру восстановления, подтвердив правильность выполненных действий.
