Цель работы

Овладеть практическими навыками создания таблиц базы данных PostgreSQL 1X, заполнения их рабочими данными, резервного копирования и восстановления БД.

Практическое задание

1. Создать базу данных с использованием pgAdmin 4 (согласно индивидуальному заданию).
2. Создать схему в составе базы данных.
3. Создать таблицы базы данных.
4. Установить ограничения на данные: Primary Key, Unique, Check, Foreign Key.
5. Заполнить таблицы БД рабочими данными.
6. Создать резервную копию БД.

Указание:

Создать две резервные копии:

- с расширением CUSTOM для восстановления БД;
 - с расширением PLAIN для листинга (в отчете);
 - при создании резервных копий БД настроить параметры Dump options для Type of objects и Queries.
7. Восстановить БД.

Описание проекта

В этом отчете я буду описывать спроектированную и созданную мной на работе базу данных. Система, для которой создавалась база данных – это обучающая платформа, интегрированная в Telegram бота. У пользователей платформы есть 3 роли – ученик, учитель и администратор.

Ученики получают доступ к образовательной платформе, оплатив обучение и авторизовавшись в Telegram боте при помощи почты, указанной при оплате.

Ход работы

Ограничения на данные были установлены на стороне backend'а образовательной платформы.

В самой базе данных были установлены привязки по Foreign key.

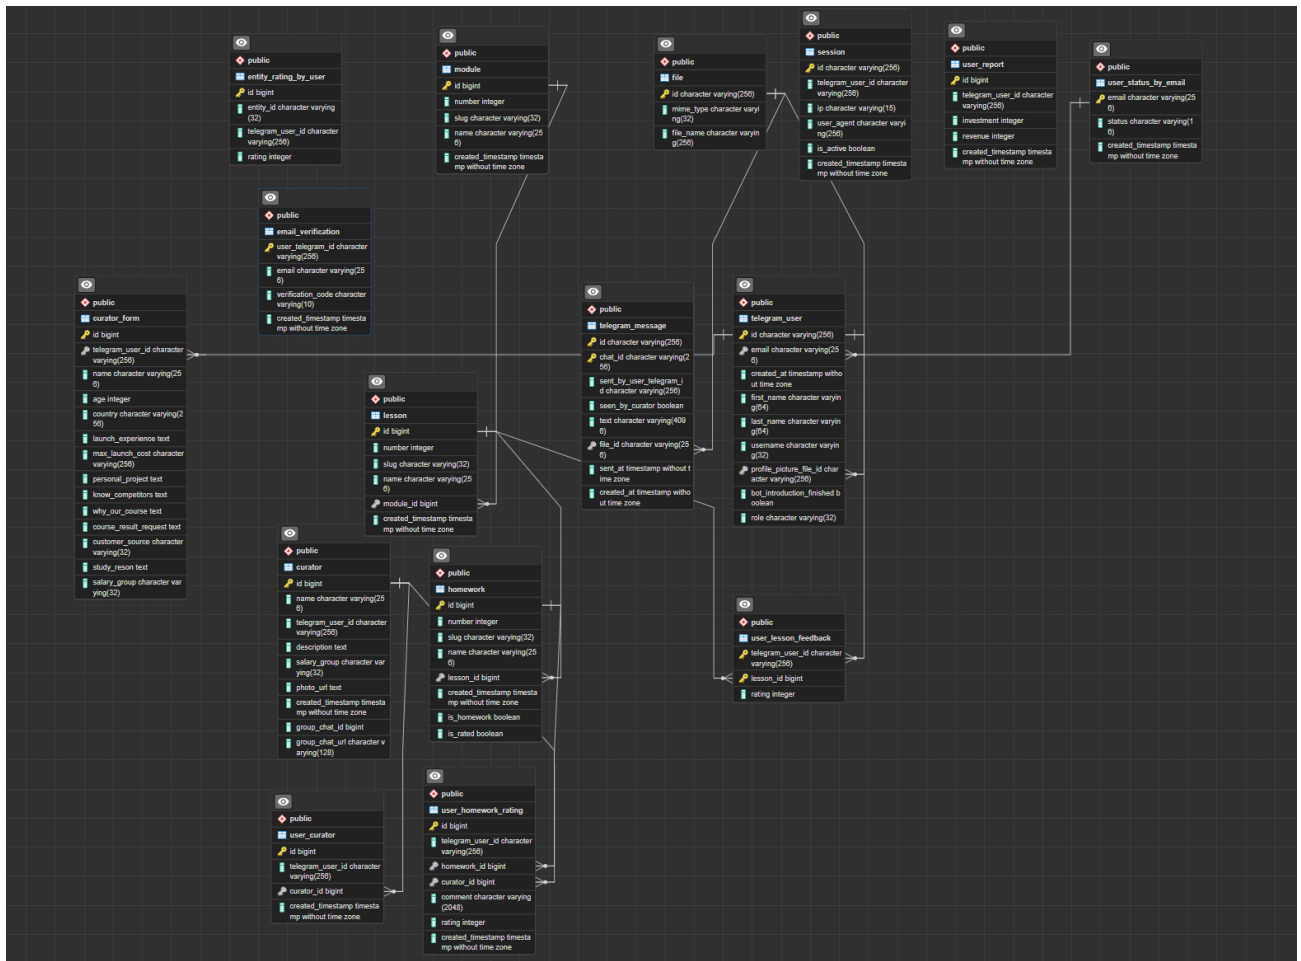

Схема логической модели базы данных

Листинг резервной копии (Plain):

Вывод

В ходе данной лабораторной работы я научился генерировать ERD-диаграмму при помощи pgAdmin, а также познакомился с “check” в PostgreSQL, служащим для проверки добавляемых данных.

Также я улучшил свои навыки работы со средствами резервного копирования баз данных pgAdmin.
